

# TYPOGRAPHY CARE INSTRUCTIONS

**Rakumba**

## Cleaning and Maintenance

CODE - RP-E-1801-1808

REVISION 10.12.20

REVISED BY: JC

Thank you for choosing Rakumba. We hope you continue to enjoy your light for years to come. To ensure the longevity of your new product, please read the following important information.

### **Frosted glass and Frosted Acrylic**

Typography includes glass and acrylic frosted using environmentally sustainable sandblasting rather than acid etching. To keep it looking its best, avoid touching with bare hands and keep it free of oils and waxes. Installers should wear gloves during setup.

### **Anodised surfaces**

Anodised aluminium is a durable and easy to clean surface. As with the glass however, it is best to avoid touching with bare hands to avoid fingerprints.

### **Maintenance Care**

1. Typography contains integrated, long life LED lightsources that do not require replacement. Do not open the fittings for lamping changes. If a fitting does not illuminate, and the reason can not be discovered through troubleshooting, return to Rakumba for repairs.
2. Regularly remove dust with a clean, dry cloth or dusting wand.
3. To remove fingerprints from the glass or aluminium, use a non abrasive window cleaner sprayed onto a soft cloth. Never spray liquid cleaners directly onto the light fitting.
4. Take care when cleaning not to twist/rotate/re-angle the light positions after they are locked onto the rail. They are fixed in place during install, and forceful re-adjusting during cleaning can damage the connection.
