

CoALL

Designed by 31 Degrees

31

Enhance your dwell time,
strengthen connections,
and extend longevity.
CoALL, an urban planning
tool for contemplation
and connection.

With continuity at its
core, CoALL is designed
for everyone.

Australian designed and manufactured by 31 Degrees, CoALL is crafted from premium materials to create inclusive, accessible forms for public spaces - designed and built for everyone.

Inspired by the brutalist architecture of 1950-70's, CoALL embraces simple geometric forms and raw materials, resulting in clean, sophisticated lines that sit with both function and quiet confidence in the public realm.

CoALL invites community,
nurtures reflection, and
fosters connections - both
with the natural
environment and between
people.

Created in Australia with a vision to produce authentic, long-lasting furniture solutions, 31 Degrees emphasises original design, underpinned by ethically and sustainably sourced materials.

31degrees.design

Reusable

Engineered for long-term outdoor performance in extreme weather, CoALL can be refinished and restored to its original condition even after decades of use.

Recyclable

Designed for disassembly (DFD), CoALL components can be easily recycled or upcycled.

Embedded Carbon Minimisation

Concrete sections can incorporate recycled aggregates - such as glass, masonry, and construction waste - to significantly reduce the overall carbon footprint.

Dynamic Spaces

CoALL can be adapted, interchanged, and modified on site allowing for dynamic usage that compliments seasonal changes in public spaces.

Modular Design

CoALL is conceived as a flexible kit of parts, offering circular and square concrete modules, Y-shaped junctions tables, and seating elements.

Each piece connects seamlessly to form layouts that adapt to diverse public environments - from intimate gathering points to expansive communal installations.

Seating Options

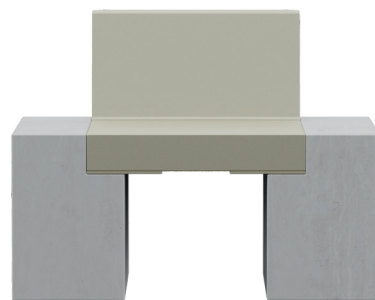

Benches and seats are available with or without backrests, with the additional option of integrated armrests, allowing comfort and accessibility to be tailored for different settings and user needs.

Material and Finish Choices

The system can be specified in plain powder-coated aluminum for a sleek, contemporary look, with timber slats for warmth and tactility, or with upholstered options for added comfort and design expression.

Versatility in Use

The modularity allows CoALL to function equally as a place for rest, reflection, or social interaction - its design language remaining cohesive across all formats while accommodating the unique demand of each space.
